PROFILE

Fullstack engineer with 5+ years building end-to-end products — from database design and API architecture to responsive frontends and mobile apps. I take ownership of the complete stack across web, mobile, and cloud, delivering scalable systems that handle millions of records in production. I make deliberate technical decisions at every layer, prioritizing performance, maintainability, and real business impact.

CORE STACK

PRIMARY

Node.js NestJS React TypeScript Next.js React Native Laravel PHP Microservices
REST APIs WebSockets / TCP MySQL PostgreSQL Angular Docker
AWS (ECS, ECR, RDS, ALB, S3, CloudFront)

ALSO

Python Django Git Linux Scrum / Agile

EXPERIENCE

ArrowFin

Fulltime

Jun 2025 — Present

Fullstack Developer → Technical Lead

- Owned the full stack of a high-performance financial platform — architecting the **Laravel REST API**, the **React + TypeScript frontend**, and the cloud infrastructure end-to-end.
- Designed the frontend with **skeleton loaders**, **lazy loading**, and **real-time WebSocket updates**, querying **6M+ financial trades on demand** with smooth UX.
- Built a data migration pipeline: **8M records in 30 minutes**, down from 28 hours — a **98% reduction** in execution time.
- Developed real-time microservices in **NestJS + WebSockets** with live data streaming to the React frontend.
- Deployed the entire cloud infrastructure on **AWS from scratch** (ECS, ECR, ALB, RDS, CloudFront, S3, ACM, IAM) with full Dockerization.

Galaxia Seguridad

Freelance

Apr 2022 — Jun 2026

Fullstack & Systems Architect

- Designed a full proprietary ecosystem (web, mobile, and backend) from scratch, eliminating **100% of third-party software costs**.
- Designed and executed the transformation of a legacy monolithic application into a **NestJS microservices ERP** platform with an API Gateway and per-domain databases — centralizing the company's operation in a unified, scalable platform that processes **25K daily events** nationwide.
- Built a **React Native mobile app** for security guards with real-time background GPS, patrol round logging, and supervisor minuta — deployed across **5 cities**.
- Built a **GPS tracking system** with NestJS + TCP that receives, decrypts, and processes real-time trama data from vehicle GPS devices, monitoring **~40 vehicles**.

Satori IPS

Freelance

Feb 2025 — Jul 2026

Fullstack Architect

- Built the full stack of a healthcare ERP — **Laravel API + React frontend** — covering the company's complete operational workflow.
- Implemented an interactive **3D procedural guide using Three.js** — physicians annotate a 3D face model with treatment points managed by the clinical director.
- Built a **Python chatbot** connected to the database for natural-language resolution of complex operational flows.
- Developed a **NestJS microservice** integrated with Colombia's Ministry of Health IHCE system for virtual patient record management.

Reno Ectual Freelance

Nov 2025 – Apr 2026

Fullstack Developer

- Designed and built the full product: a **Next.js + React ecommerce** storefront, a **Laravel ERP** for internal operations, and a **NestJS microservice** for electronic invoicing integrated with Colombia's DIAN.

Serviunix Fulltime

Oct 2023 – Feb 2025

Development Lead

- Led the development team: managed projects, gathered requirements, defined architecture, and guided junior developers.
- Built custom corporate applications using PHP, Laravel, Vue, React, and Django across multiple client engagements.

Hack A Boss Fulltime

Oct 2023 – Oct 2024

Fullstack Developer

- Developed new features and resolved production incidents for LogRoot, a SaaS HR and time-tracking platform in PHP and JavaScript.

EARLIER EXPERIENCE

Psicol Feb–Oct 2023 · **Clase de Excel** Apr 2022–Feb 2023 · **Galaxia Seguridad (contract)** Oct 2021–Apr 2022 · **Flores Isabelita** Apr–Sep 2021

Fullstack development with **Laravel, PHP, Vue, React Native & MySQL** across SaaS and corporate projects.
